

Ashland Pump SW40/50/75 Sewage Pump

Ashland Pump is excited to announce that we have updated our existing line of Sewage Pumps with vortex impellers. The SW40, SW50 and SW75 series are now equipped with cast iron vortex impellers. The non-clogging vortex design on our fractional horse-power allows better passing of materials that may get flushed (wipes, rags, etc.) while maintaining the same performance. The inventory in our facility in Ashland, OH consists of vortex impellers.

- Vortex impellers are well suited for today's waste stream, as they are low profiling and resistant to clogging
- Vortex impellers handle standard waste solids as well as rags and fibrous, stringy material
- The pumps have been updated to 3450 rpm to achieve the same performance as the previous 2-vane design model

We thank you for your input and continued support of the Ashland brand. We will continue to strive to make changes based on your feedback as partnerships are extremely important to us.

Honest, Professional, Dependable
